

Aquatic Worm 🙄

- Looks like an earthworm, but smaller and thinner
- Usually red or pink in color

Crayfish 😐

- Looks like a little lobster!

Black Fly Larva 🙄

- Bowling pin shape
- Attaches its rear end to leaves, twigs, rocks, etc.
- Feathery feeding appendages on head

Damselfly Nymph 😐

- 3 thick "tails" (they're really gills!)
- Long, thin body
- 6 long jointed legs
- Head is often football-shaped

Caddisfly Larva (Case-Builder) 😊

- Builds a case out of leaves, twigs, pebbles, etc.
- 6 jointed legs close to the head
- 2 hooks at rear end
- Can look similar to midge fly larvae (look for legs!)

Dragonfly Nymph 😐

- Rounder, fatter shape
- 6 jointed legs
- Large eyes on sides of head
- Look carefully, they play dead!

Flatworm 🙄

- Arrow-shaped head
- Cartoonish eye spots

Caddisfly Larva (Net-Spinner) 😐

- Feathery gills on underbelly
- 6 jointed legs close to the head
- 2 hooks at rear end with feathery extensions
- Thicker body than the case-builder

Crane Fly Larva 😐

- Looks like a caterpillar
- Raised ridges around its body
- Fleshy protrusions at rear end

Alderfly Larva 😐

- Six segmented legs
- Single tail filament
- 6-8 pairs of lateral filaments

Leech 🙄

- Segmented and worm-like
- Can be gray, brown or black in color
- Not all leeches suck blood!

Hellgrammite 😊

- 6 true legs, but *lots* of lateral filaments
- Pincers on head
- Very dark in color

Gilled Snail

- Has an operculum (door) that seals off the shell opening
- Shell opens to the right
- Gilled is good!

Lunged Snail

- No operculum
- Shell opens to the left (Left is Lunged!)

Mayfly Nymph

- 6 jointed legs
- 3 long, hair-like tails
- Gills along the abdomen

Midge Fly Larva

- Small and worm-like
- Usually clear or red in color
- Twitch and writhe

Scud

- Side swimmers, move very quickly
- Clear or gray in color
- Crustaceans with lots of legs

Sowbug

- Aquatic version of the pill bug
- Lots of legs, two long antennae
- Usually gray or brown in color

Stonefly Nymph

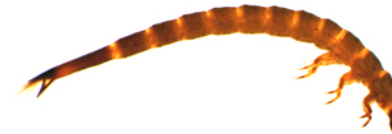

- 2 antennae and 2 tails
- 6 jointed legs
- 3 armored plates on thorax

Water Penny

- Flattened, circular bodies
- Usually attached to rocks

Riffle Beetle Larva

- Six segmented legs
- Elongate and cylindrical
- Usually dark in color
